PROFESSIONAL SUMMARY

Software Engineer based in Hyderabad, building across React and TypeScript interfaces, Java and Spring Boot services, and secure API integrations. Strong hands-on fluency in agentic-AI workflows and AI-assisted development, with an emphasis on structured planning, direction, review, testing, and engineering accountability.

ENTERPRISE EXPERIENCE

O.C. Tanner | Associate Software Engineer

`Oct 2024 - Present`

I develop and support enterprise applications across frontend, backend, and API layers, with a focus on maintainable implementation, secure integrations, and reliable delivery.

From interface to implementation.

React and TypeScript interfaces, Java and Spring Boot services, business logic, REST APIs, and GraphQL.

- Reusable components for enterprise admin interfaces
- Responsive layouts and consistent UI behaviour
- Application logic across frontend and backend layers

React | TypeScript | Java | Spring Boot | GraphQL

Making systems work together.

Google Cloud Apigee proxies with OAuth 2.0 flows, CORS, routing, policies, and OpenAPI specifications.

- API proxy development and troubleshooting
- Authentication, access policies, and request routing
- OpenAPI 3.0 specifications and API validation

Apigee | OAuth 2.0 | CORS | OpenAPI | REST

Following the issue to its source.

Cross-layer issue investigation and root cause analysis, with fixes delivered through QA and production environments.

- Cross-layer troubleshooting and root cause analysis
- Coralogix log analysis and request-flow investigation
- Scheduled and asynchronous workloads using Quartz and multithreading

Coralogix | Quartz Scheduler | Multithreading | API testing

The work around the release.

Bi-weekly production releases, deployment coordination, validation, post-deployment checks, and Scrum Master responsibilities.

- Stand-ups, ticket allocation, and sprint retrospectives
- Sprint and engineering progress tracking with Jira and Jellyfish
- Code reviews, API validation, and GitHub Actions workflows
- GitHub Copilot support for development, review, debugging, refactoring, and testing

Release coordination | Scrum | Jira | Jellyfish | GitHub Actions

PUBLISHED RESEARCH

Studies on Anomaly Detection Techniques

IEEE conference publication | 2023

Published research on anomaly detection, alongside my work in software engineering.

https://ieeexplore.ieee.org/document/10083885

FREELANCE WORK

Filostech

UI application | Freelance collaboration | Team of 4

I worked with a four-person team on a UI application using React, TypeScript, and AngularJS, focusing on reusable components, responsive layouts, and UI improvements.

- Developed modular, reusable UI components
- Proposed and implemented UI/UX improvements
- Focused on responsive behaviour and maintainable frontend structure

React | TypeScript | AngularJS | TSX

EDUCATION

B.Tech in Computer Science and Engineering

KL University, Guntur | 2020 - 2024 | CGPA 9.2

CREDENTIALS

Red Hat Certified Enterprise Application Developer

Enterprise Java application development.

Earned Dec 2022 | Valid through Dec 2025

View credential

AWS Certified Cloud Practitioner

Cloud concepts, core AWS services, security, and pricing fundamentals.

Earned May 2022 | Valid through May 2025

View credential

WORKING APPROACH

Agentic AI is a core part of how I work - from shaping an idea to directing tasks, reviewing outputs, and refining the implementation.

I use it to explore alternatives, challenge assumptions, structure a plan, and work through execution. I stay responsible for what gets built, how it behaves, and whether the result holds up.

Explore | Structure | Direct | Verify
